### 1.3 Select one weather station (using a select widget)

```
[3]: # Define the default parameters and tag the cell accordingly
wsno = -1 # default -1 selects the last index, 2 sets BAS weather station
#
# Calling syntax from shell:
#
# time for i in {0..28}; do \
#   papermill MeteoCH.ipynb \
#   MeteoCH.output.ipynb \
#   -p wsno $i; done
#
# The time command at the beginning of the call may be omitted.
```

```
